LinkedIn: linkedin.com/in/mohamed-saber-tata-85740b398 | GitHub: github.com/tmsaber

PROFILE

Final-year (5th-year) engineering student in computer science, Data Science specialization (Université Badji Mokhtar-Annaba), graduating in 2027. Projects in NLP, computer vision and time-series forecasting, plus web development experience (React, Next.js). Motivated, organized and a good team player. Seeking an end-of-studies internship or a first role in data science and machine learning.

EDUCATION

Engineering Degree in Computer Science, Data Science specialization
Université Badji Mokhtar-Annaba, Faculty of Technology | 2022 – 2027 (5th year, expected graduation) | Annaba, Algeria
Advanced modules: Generative AI, Computer Vision, NLP, Reinforcement Learning, Uncertainty Management.

Technical Baccalaureate, Mechanical Engineering
2021 – 2022 | Taref, Algeria

EXPERIENCE

IT and Information Systems Intern — Port d'Annaba
March – April 2026 (7 working days) | Annaba, Algeria

- Analyzed the port's information system and how it supports operations.
- Mapped the main business processes: vessel management, cargo and container handling, billing.
- Studied the network architecture and IT infrastructure.
- Wrote a full internship report and a presentation of the findings.

PROJECTS

Customer Complaint Classification — Algérie Télécom
Personal project based on the Hackathon FORSA tic challenge | Python, pandas, scikit-learn

- Classification of social media comments in Algerian dialect (~30,000 comments, 9 classes) and call-center tickets (6 classes), evaluated with Macro F1-Score.
- Handling of Darija text and Arabic-French code-switching.

FreshClass — Fruit Quality Classification
Team project (6 members), Nov – Dec 2025 | Python, TensorFlow/Keras, MobileNetV2

- Good / Bad classification of 6 fruits (12 classes, ~14,800 images) using transfer learning; 96.3% accuracy on the test set (2,218 images).
- Role: documentation lead and test evaluation (README, technical report, code documentation, final presentation, model testing and evaluation). System delivered with a FastAPI backend and a Next.js web interface.

Dynamic Energy & Cloud Cost Optimizer
Personal project, in progress | Python, SARIMAX, pandas, boto3, Streamlit

- Forecasting of AWS cluster compute load (SARIMAX) to optimize Spot / On-Demand allocation and produce a 24-hour provisioning plan.

Chair Presence Detector
Python, OpenCV, TensorFlow/PyTorch

- Designed and trained a convolutional neural network for binary image classification (chair present or not).

SKILLS

Languages: Python, SQL, Java, C, JavaScript, PHP, HTML/CSS
Data and ML: pandas, NumPy, scikit-learn, Matplotlib, Seaborn, TensorFlow/Keras, PyTorch, OpenCV, NLP, computer vision, time-series forecasting (SARIMAX), transfer learning
Web and tools: React, Next.js, Node.js, Firebase, Git/GitHub, Jupyter / Google Colab, Jira, Microsoft Office (Word, Excel)

LANGUAGES

Arabic: native | French: intermediate | English: intermediate
